Nikita Nikolaev

Senior Software Engineer

Petah Tikva, Israel | +972 527473720 | Nikolaevnik13@gmail.com | LinkedIn | Digital Card

PROFESSIONAL SUMMARY

Java Software Developer with 8+ years of experience designing, building, and delivering distributed, high-throughput backend systems, plus 1 year of web frontend development. Specialized in Spring Boot microservices, REST APIs, and event-driven architectures (Kafka). Experienced in leading end-to-end feature design and implementation, and in contributing to architecture decisions across the full delivery lifecycle — design, development, and testing.

TECHNICAL SKILLS

- **Languages:** Java, JavaScript, Python.
- **Frameworks & Backend:** Spring Framework, Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Hibernate ORM, JPQL, Lombok, Jackson, JMX, Maven (multi-module), Microservices, Event-Driven Architecture, Distributed Systems.
- **APIs & Messaging:** REST, OpenFeign, OpenAPI/Swagger, Apache Kafka, JWT, API Gateway (Zuul), Spring Mail.
- **Databases:** PostgreSQL, MySQL, MongoDB, Elasticsearch.
- **DevOps & Cloud:** Docker, Kubernetes, OpenShift, GCP, Heroku, MongoDB Atlas, CI/CD.
- **Testing:** JUnit, Mockito, WireMock.
- **Frontend:** React, Redux, HTML5, CSS, jQuery, Bootstrap.
- **Version Control:** Git, GitHub, Bitbucket.
- **AI-Assisted Development:** Cursor, MCP integrations, custom agent skills & rules.
- **Methodologies & tools:** SCRUM, Agile, Jira.

PROFESSIONAL EXPERIENCE

2021 - Present: Java Software Developer - Amdocs | Israel

Large-scale telecom subscriber-provisioning and charging platform, built as a distributed system of Spring Boot microservices. The platform is the gateway between the operator's business systems and the charging engine, translating business requests into the data structures required by the charging platform.

- Led the design and end-to-end implementation of new features across multiple Spring Boot microservices, owning them from technical design through testing and production rollout.
- Contributed to architecture and design decisions for the distributed platform - service boundaries, REST/OpenFeign API contracts (OpenAPI/Swagger), and event-driven messaging. Designed and implemented Kafka-based event flows for asynchronous, decoupled communication between microservices, balancing business requirements with reliability and performance.
- Wrote comprehensive automated tests with TestNG, JUnit, Mockito, and WireMock, reducing regressions and stabilizing releases.
- Investigated, troubleshot, and solved production issues, reducing downtime and customer impact.
- AI-assisted development: built custom Cursor agent skills, rules, and MCP integrations to accelerate development, code review, debugging, and log/issue investigation.

Technologies: Java, Spring Boot, Spring MVC, Spring Data JPA/Hibernate, PostgreSQL, Maven (multi-module), OpenFeign (OpenAPI/Swagger), Kafka, Hystrix, JWT, Lombok, Jackson, JUnit, Mockito, WireMock, Docker, Kubernetes/OpenShift, Git, Cursor/MCP.

2018 - 2021: Full-Stack Java Developer - Elpisor LTD | Rehovot, Israel

Social network for pet owners — a platform for communication between registered users (posts, messages, images) and lost-and-found pet announcements, built on a microservices architecture.

- Built the Java server-side of a microservices-based social platform enabling user communication, media posts, and lost-and-found pet announcements. Implemented secure authentication and authorization with JWT and request routing via Netflix Zuul API Gateway.
- Developed an email-notification flow that alerted users to matching posts with approve/deny actions.
- Integrated asynchronous messaging with CloudKarafka and deployed on Heroku with MongoDB Atlas and Bonsai/Elasticsearch.

  Technologies: Java, Spring Framework, JWT, Netflix Zuul, MongoDB Atlas, Elasticsearch, CloudKarafka, Heroku, Microservices.

2017 - 2018: Full-Stack Java Developer - Inetex LTD | Rehovot, Israel

E-commerce marketplace — an online shop with a wide product assortment.

- Developed server-side services and modules, including accounting and logging.
- Contributed to frontend development and provided ongoing website support and maintenance.

  Technologies: Java, Spring Boot, HTML, CSS, jQuery, Bootstrap, React.

2011 - 2015: System Engineer - Magalcom (Telrad Group)

- Planned digital communication schemes, supervised installations, and configured video surveillance.

PERSONAL PROJECT

2026 - Present: Attendance Platform - Employee Time-Tracking System

Live demo: nik-attendance-app.duckdns.org | Code: github.com/nikolaev13nik

- Built 3 Spring Boot microservices (accounting/auth issuing JWTs, time tracking, AI assistant) and a React SPA, with PostgreSQL schemas and Flyway migrations.
- Multi-tenant security: the tenant in every URL is checked against the JWT, with a role hierarchy, packaged as a shared Spring Boot auto-configuration library.
- Kafka event flows with OpenAPI-generated contracts, dead-letter topics, and Micrometer Tracing across HTTP, Kafka, and email; a Claude API assistant emails managers a six-month trend analysis.
- Deployed to GKE with Helm and cert-manager TLS; GitOps with Argo CD on local k3s; GitHub Actions CI with an 85% coverage gate and images in GitHub Container Registry.

EDUCATION

- **Advanced Programming Java Backend Development**, Tel-Ran Educational Center | 2015- 2016.
- **BSc in Computer Science**, Orel State University, Russia | 2002 – 2007.
